

Approved Silicone Sealants

Dow Corning 791
GE Rapid Strength
GE Siliglaze II
Novagard M150
Pecora 896

If the sealant you use and prefer is not included in this list, it may still be safe to use. Please call or email and we will verify.

Not Recommended for use with Cardinal IG Units

CRL Silicon Sealant #33S

Silicone Sealants for IG Units

Not all silicone sealants are safe to be used with Cardinal insulated glass (IG) units for glazing. Cardinal is one of our largest IG unit suppliers, and a leader in the glass industry. We have extended this advisory criteria to be followed for all glass units used and supplied by CrystaLite, Inc.

Silicones containing **Acetoxy** will attack the sealant of the unit itself and cause failure. **Acetoxy** is often listed as a base element in chemicals such as **methyltriacetoxysilane**. These sealants **should not** be used with IG units. Acetoxy-Cure has a vinegar smell that can be used to identify sealants containing this.

Neutral-Cure silicone is recommended and is commonly used. The list to the left contains sealants that have been tested and approved to be used with IG units. If the sealant you use and prefer is not included in this list, it may still be safe to use. Please call or email and we will verify.
